

MERIDIAN RESIDENCES

UI DESIGN SYSTEM + GPT DEVELOPMENT GUIDE

A single source of truth for the Team 5 resident portal UI. Use this document during implementation, code reviews, Figma work, and future conversations with GPT-based coding assistants.

Product: Meridian Residences Resident Portal | **Style:** Modern Luxury Serviced Apartment + Clean SaaS Dashboard

1. Design System Purpose

This guide locks the visual language for the entire Meridian Residences application. The portal should feel like one premium residential management platform, not four independently designed pages.

Overall vibe: modern luxury serviced apartment + clean SaaS dashboard.

The interface should communicate premium residential living, trust, clarity, calmness and operational usefulness. It should be professional and polished without becoming a flashy hotel site, cyber/AI dashboard, overly colorful SaaS product, or a page full of gradients.

Non-negotiable design principles

- **One application:** every page shares the same shell, typography, colors, spacing and component language.
- **Calm premium feel:** forest green, olive, warm gold, warm cream and white; gold is only an accent.
- **Functional first:** resident tasks such as leases, invoices and maintenance must be immediately understandable.
- **Consistency over creativity:** individual contributors may add content and workflow-specific controls, but should not invent new visual systems.
- **AI belongs to the product:** the assistant may be visually distinctive within the same system, but must not become a separate ChatGPT clone.

Reference image

The generated mockup is a visual reference only. The exact implementation should follow the tokens and rules in this document.

2. Master Color Palette

These colors are the official product tokens. Do not introduce page-specific primary colors.

Purpose	Name	HEX	Usage
Primary	Forest Green	#26382A	Main actions, navigation emphasis, headings, brand identity
Primary Hover	Deep Forest	#1D2C20	Hover/active states for primary controls
Secondary	Olive	#6C7750	Secondary emphasis, AI interface, supportive actions
Accent	Champagne Gold	#B89B5E	Logo detail, premium accent, tiny highlights, AI sparkle
Background	Warm Cream	#F6F0E4	Application/page background
Surface	White	#FFFFFF	Cards, navbar, sidebar, forms
Main Text	Charcoal	#202720	Primary readable content
Secondary Text	Warm Slate	#6D716A	Descriptions, metadata, helper text
Border	Warm Gray	#DED8CB	Card, input, table and divider borders
Success	Green	#2E7D5B	Paid, active, resolved
Warning	Amber	#C58A1C	Pending, high priority
Error	Red	#C94C4C	Overdue, urgent, destructive/error states
Info	Blue	#3978A8	Informational and medium-priority states

Official core five

FOREST #26382A	OLIVE #6C7750	GOLD #B89B5E	CREAM #F6F0E4	WHITE #FFFFFF
--------------------------	-------------------------	------------------------	-------------------------	-------------------------

Gold rule: use #B89B5E as a luxury accent, not as the main page color, large background, body text or every heading.

3. Global Application Shell

All authenticated pages use one common shell. Create it once and reuse it.

Sidebar

- Width: **240px**.
- Background: **#FFFFFF**.
- Right border: **#DED8CB**.
- Logo text: MERIDIAN / RESIDENCES.
- Navigation: Dashboard, My Lease, Invoices, Maintenance, AI Assistant, Profile; Help and Log Out separated near the bottom.

Top navbar

- Height: **64px**.
- Background: white; bottom border: #DED8CB.
- Keep one shared **Navbar.jsx**; do not create member-specific navbars.

Page structure

```
PAGE TITLE
Page description

[ summary card ] [ summary card ] [ summary card ]

SECTION TITLE

[ main content card / table / workflow ]
```

Recommended page padding is 32px on desktop. Keep content in a comfortable readable width instead of stretching every card edge-to-edge.

4. Typography System

Use **Inter** throughout the product. If a hosted font is not available, use the system fallback stack.

```
font-family:
Inter,
-apple-system,
BlinkMacSystemFont,
"Segoe UI",
sans-serif;
```

Role	Size	Weight	Purpose
Page title	28px	600	Primary page heading
Section title	20px	600	Major section headings
Card title	16px	600	Card/row headings
Body	14px	400	Normal readable content
Secondary	13px	400	Descriptions and metadata
Status / small	12px	400/600	Badges, labels, compact states
Important value	14–20px	600	Money, dates, key metrics

Typography rules

- Use hierarchy, not color overload, to make information scannable.
- Avoid all-caps for normal content; reserve uppercase for compact labels or status badges.
- Keep line lengths readable, especially on the AI assistant and policy responses.
- Do not introduce a second font for a page or feature.

5. Spacing, Cards and Controls

The spacing system uses multiples of 4px.

4px 8px 12px 16px 20px 24px 32px 40px 48px

Token / rule	Value
Page padding	32px
Card padding	20px
Card gap	16px
Section gap	32px
Button padding	12px 18px
Small radius	6px
Medium radius	8px
Large/card radius	12px
Card shadow	0 2px 8px rgba(0,0,0,0.04)

Card standard

```
background: #FFFFFF;  
border: 1px solid #DED8CB;  
border-radius: 12px;  
padding: 20px;  
box-shadow: 0 2px 8px rgba(0,0,0,0.04);
```

Button standard

Type	Background	Text	Border / behavior
Primary	#26382A	#FFFFFF	Hover to #1D2C20; 8px radius; 40px height
Secondary	#FFFFFF	#26382A	1px #DED8CB border
Destructive	#C94C4C	#FFFFFF	Use only for destructive actions

Animation

- Use subtle transitions only. Avoid glowing borders, excessive motion, glassmorphism, rainbow gradients or large animated effects.

6. Icons and Responsive Rules

Use one icon library: **Lucide React**. Do not mix icon libraries.

Recommended icons

Home
FileText
CreditCard
Wrench
MessageCircle
User
Bell
ChevronDown
Plus
Check
AlertTriangle

Responsive breakpoints

Device	Breakpoint	Layout behavior
Desktop	≥ 1200px	240px sidebar + 64px navbar + content area
Tablet	768–1199px	Compact sidebar or responsive navigation; preserve hierarchy
Mobile	< 768px	Top navbar + content + mobile/bottom navigation; stack cards

Responsive rules

- Three-card dashboard rows stack gracefully on smaller screens.
- Tables should become horizontally scrollable or convert to stacked invoice rows.
- Forms should use full available width on mobile.
- Never hide critical status, due date, priority or action information merely to fit a smaller screen.

7. Page-by-Page UI Specification

These are the four story-specific pages plus the central dashboard. All remain inside the same application shell.

Dashboard

```
Good morning, Anu
Welcome back to Meridian Residences

[ CURRENT UNIT ] [ NEXT PAYMENT ] [ OPEN REQUESTS ]

Recent Activity Quick Actions
• Invoice overdue View My Lease
• Maintenance request updated Pay Invoice
• Payment received Submit Maintenance Request
• New lease agreement Ask AI Assistant
```

- Use white cards with subtle borders/shadows.
- Current unit example: Apartment 101 / 2 BHK.
- Next payment example: ■45,000 / due 10 Sep 2026.
- Open requests should show a count and a concise status.

My Lease — Member 1

```
My Lease
View your current residence agreement and lease details.

CURRENT LEASE ACTIVE
Apartment 101
Meridian Residences
Lease Period: 01 Jan 2026 — 31 Dec 2026
Monthly Rent: ■45,000
Renewal Date: 01 Dec 2026

[ Download Agreement ] [ Request Renewal ]
```

Invoice — Member 2

```
Invoices
View your recurring billing and payment status.

Total Outstanding ■45,000
Next Due 10 Sep 2026
Last Payment ■45,000

Invoice Billing Period Amount Due Date Status
INV-003 Aug 2026 ■45,000 10 Sep OVERDUE
INV-002 Jul 2026 ■45,000 10 Aug PAID
INV-001 Jun 2026 ■45,000 10 Jul PAID
```

8. Maintenance and AI Assistant UI

Maintenance — Member 3

Maintenance
Report an issue or track your existing requests.

+ Submit Request

[All] [Open] [In Progress] [Resolved]

MT-005 Water leakage
Kitchen sink is leaking
Priority: HIGH Status: IN PROGRESS
Submitted: 08 Sep 2026

Maintenance priority mapping

Priority	Color	HEX
LOW	Gray / neutral	#6D716A
MEDIUM	Blue	#3978A8
HIGH	Amber	#C58A1C
URGENT	Red	#C94C4C

AI Assistant — Member 4

The assistant is the one page allowed to feel slightly different, but it must still use the same shell, typography, spacing and card system.

Lease & Policy Assistant
Ask questions about your lease and building policies.

You: Is parking included?

Assistant:
According to your building policy, parking is included...

Sources
■ Building Parking Policy
■ Resident Handbook

[Ask about your lease or building... ➤]

- Primary AI accent: olive #6C7750.
- Warm gold may be used lightly for the AI sparkle/icon.
- Do not introduce purple/neon/cyber styling.
- Show grounded source references with the response.

9. Status, Badge and Data-Display Rules

Status colors are semantic and fixed. Members must not invent their own status colors.

Domain	State	Color
Lease	ACTIVE	Success #2E7D5B
Lease	PENDING	Warning #C58A1C
Lease	EXPIRED	Error #C94C4C
Invoice	PAID	Success #2E7D5B
Invoice	PENDING	Warning #C58A1C
Invoice	OVERDUE	Error #C94C4C
Invoice	CANCELLED	Neutral gray
Maintenance	LOW	Neutral gray
Maintenance	MEDIUM	Info #3978A8
Maintenance	HIGH	Warning #C58A1C
Maintenance	URGENT	Error #C94C4C

Badge behavior

- Use compact rounded badges with clear text.
- Do not rely on color alone; always show the status word.
- Keep badges visually secondary to the primary content.

10. Shared Component Library

Create these components once before the four members build story pages.

```
frontend/src/components/  
■■■ Navbar.jsx  
■■■ Sidebar.jsx  
■■■ PageHeader.jsx  
■■■ Card.jsx  
■■■ StatCard.jsx  
■■■ Button.jsx  
■■■ SecondaryButton.jsx  
■■■ StatusBadge.jsx  
■■■ PriorityBadge.jsx  
■■■ Loading.jsx  
■■■ ErrorMessage.jsx  
■■■ EmptyState.jsx  
■■■ Modal.jsx  
■■■ Input.jsx  
■■■ Select.jsx  
■■■ Textarea.jsx  
■■■ LeaseCard.jsx  
■■■ InvoiceCard.jsx  
■■■ MaintenanceCard.jsx  
■■■ ChatMessage.jsx
```

Component responsibility

Component	Responsibility
Navbar	Global top navigation, notification and resident profile area
Sidebar	Global application navigation
PageHeader	Consistent title + description + optional action
Card	Standard surface container
StatCard	Compact dashboard metric
Button	Primary action
SecondaryButton	Secondary action
StatusBadge	Shared semantic status display
PriorityBadge	Maintenance priority display
Loading / ErrorMessage / EmptyState	Consistent async states
Modal / Input / Select / Textarea	Shared form primitives
LeaseCard / InvoiceCard / MaintenanceCard	Domain presentation components
ChatMessage	Consistent assistant conversation bubble

Important: do not create InvoiceStatusBadge.jsx, TicketStatusTag.jsx, etc. when the shared StatusBadge can cover the use case.

11. Official theme.js

Place the official tokens in one shared file and import/use them consistently.

```
export const theme = {
  colors: {
    primary: "#26382A",
    primaryHover: "#1D2C20",
    secondary: "#6C7750",
    accent: "#B89B5E",
    background: "#F6F0E4",
    surface: "#FFFFFF",
    text: "#202720",
    textSecondary: "#6D716A",
    border: "#DED8CB",
    success: "#2E7D5B",
    warning: "#C58A1C",
    error: "#C94C4C",
    info: "#3978A8"
  },

  radius: {
    sm: "6px",
    md: "8px",
    lg: "12px"
  },

  spacing: {
    xs: "4px",
    sm: "8px",
    md: "16px",
    lg: "24px",
    xl: "32px",
    xxl: "48px"
  }
};
```

Suggested global CSS foundation

```
:root {
  font-family: Inter, -apple-system, BlinkMacSystemFont,
  "Segoe UI", sans-serif;
  color: #202720;
  background: #F6F0E4;
}

* {
  box-sizing: border-box;
}

body {
  margin: 0;
  background: #F6F0E4;
  color: #202720;
}

button,
input,
select,
textarea {
  font: inherit;
}

button {
  cursor: pointer;
}
```

12. Four-Member Development Workflow

The design system is a shared dependency. Freeze it before parallel story development.

First: designated shared-UI owner

```
Create first:
App.jsx
Navbar.jsx
Sidebar.jsx
PageHeader.jsx
Button.jsx
Card.jsx
StatusBadge.jsx
Loading.jsx
ErrorMessage.jsx
EmptyState.jsx
theme.js
global.css
api.js
```

Then freeze these files while story development is underway.

Member ownership

Member	Primary UI	Must reuse
Member 1	Lease.jsx, LeaseCard.jsx	Navbar, Sidebar, PageHeader, Card, StatusBadge, Button
Member 2	Invoices.jsx, InvoiceCard.jsx	Same shared shell/components
Member 3	Maintenance.jsx, MaintenanceCard.jsx	Same shell + PriorityBadge/StatusBadge
Member 4	Assistant.jsx, ChatMessage.jsx	Same shell + typography/spacing/cards

Do not allow this failure mode

Member 1: forest green **Member 2:** purple **Member 3:** green **Member 4:** black cyberpunk

If a new visual pattern is genuinely needed, add it to the shared system first, then reuse it. This keeps the application coherent.

13. Using GPT / Coding Assistants for UI Development

Use this section as the reusable instruction layer whenever asking GPT, GitHub Copilot, Cursor, Claude Code or another coding assistant to build or modify Meridian UI.

Master UI instruction

You are developing the Meridian Residences Resident Portal.

Follow the official Meridian Residences UI design system exactly:

- Style: Modern Luxury Serviced Apartment + Clean SaaS Dashboard
- Primary: #26382A
- Primary hover: #1D2C20
- Secondary: #6C7750
- Accent: #B89B5E
- Background: #F6F0E4
- Surface: #FFFFFF
- Text: #202720
- Secondary text: #6D716A
- Border: #DED8CB
- Success: #2E7D5B
- Warning: #C58A1C
- Error: #C94C4C
- Info: #3978A8
- Font: Inter
- Card radius: 12px
- Card padding: 20px
- Page padding: 32px
- Section gap: 32px
- Use Lucide React only for icons.

Do not introduce a new color palette, gradients, glassmorphism, neon/cyber styling, random icon libraries, oversized shadows, or page-specific navigation.

Reuse existing shared components before creating new ones.

If a new shared component is truly necessary, make it reusable and consistent with the existing design system.

Keep the UI responsive for desktop ($\geq 1200\text{px}$), tablet ($768\text{--}1199\text{px}$), and mobile ($< 768\text{px}$).

Do not modify unrelated pages or shared files unless explicitly required.

Before coding, inspect the existing component structure and preserve existing patterns.

Prompt for a new page

Build the [PAGE NAME] page for Meridian Residences.

Goal:

[DESCRIBE USER TASK]

Use the existing Navbar, Sidebar, PageHeader, Card, Button, StatusBadge, Loading, ErrorMessage and EmptyState components wherever applicable.

Follow the official Meridian design tokens from theme.js.

Use Inter typography and Lucide React icons.

Keep the page visually consistent with Dashboard, My Lease, Invoices, Maintenance and AI Assistant.

Requirements:

1. [REQUIREMENT]
2. [REQUIREMENT]
3. [REQUIREMENT]

Do not redesign the application shell.

Do not introduce new colors or a new visual style.

Return the files that need to change and explain any shared component changes before making them.

Prompt for fixing a UI without redesigning it

Fix the following UI issue in the Meridian Residences Resident Portal:

[ISSUE]

Preserve the official UI system:

#26382A forest green, #6C7750 olive, #B89B5E gold, #F6F0E4 warm cream,
#FFFFFF surfaces, Inter font, 12px card radius, 20px card padding,
32px page padding, Lucide icons.

Do not redesign the page.

Make the smallest clean change that fixes the issue.

Do not modify unrelated components or introduce new dependencies unless necessary.

Ensure desktop, tablet and mobile behavior remains correct.

14. Ready-to-Use GPT Prompts by Member

Member 1 — Lease UI

Implement Member 1's Meridian Residences lease workflow UI.

Create/update:

- Lease.jsx
- LeaseCard.jsx
- leaseService.js if the UI needs API integration

The page must show current lease information such as unit, property, lease period, monthly rent, renewal date and lease status.

Use the shared application shell and shared components.

Use StatusBadge for lease state.

Support loading, empty and error states.

Use the official Meridian colors, spacing, typography and responsive rules.

Do not create a separate page-specific visual system.

Member 2 — Invoices UI

Implement Member 2's Meridian Residences invoice workflow UI.

Create/update:

- Invoices.jsx
- InvoiceCard.jsx
- invoiceService.js if required

Show summary information such as total outstanding, next due date and last payment.

Show recurring invoices with billing period, amount, due date and payment status.

Use fixed semantic colors: PAID=green, PENDING=amber, OVERDUE=red, CANCELLED=neutral.

Keep financial information highly readable and consistent with the Meridian design system.

Member 3 — Maintenance UI

Implement Member 3's Meridian Residences maintenance workflow UI.

Create/update:

- Maintenance.jsx
- MaintenanceCard.jsx
- maintenanceService.js if required

Allow residents to submit an issue and view/track existing requests.

Display issue type, description, priority, status and submitted date.

Priority mapping: LOW=neutral, MEDIUM=blue, HIGH=amber, URGENT=red.

Use shared StatusBadge/PriorityBadge and shared form components.

Keep the workflow action-oriented but visually consistent with the rest of the portal.

Member 4 — AI Assistant UI

Implement Member 4's Meridian Residences Lease & Policy Assistant UI.

Create/update:

- Assistant.jsx
- ChatMessage.jsx
- assistantService.js if required

The assistant answers lease and building-policy questions.

Use a clean conversation layout with user and assistant messages, a source section for grounded documents, and a bottom input composer.

Use olive #6C7750 as the AI accent and very light warm gold for the AI sparkle/icon only.

Do not copy the visual design of ChatGPT and do not introduce purple/neon colors.

Keep the same Meridian navbar, sidebar, typography, cards, spacing and responsive behavior.

15. Figma / Design Review Checklist

Use this checklist before approving a page or merging UI work.

Check	Pass condition
Brand	Meridian forest green/olive/gold/warm cream/white palette is respected
Shell	Shared Navbar and Sidebar are reused
Typography	Inter + approved sizes/weights are used
Cards	White, 1px border, 12px radius, 20px padding, subtle shadow
Spacing	Uses the 4px-based spacing scale
Buttons	Primary/secondary/destructive behavior follows the standard
Status	Semantic colors match the fixed mapping
Icons	Lucide React only
Responsive	Desktop, tablet and mobile states are handled
Accessibility	Controls have readable labels, visible focus and usable contrast
Consistency	Page looks like part of the same application
Scope	No unrelated redesign or dependency added

Visual QA questions

- If I hide the page title, can I still tell this is Meridian Residences?
- Does it look like the same product as the other three members' pages?
- Are the most important resident actions obvious within a few seconds?
- Are money, dates, priority and status easy to scan?
- Does mobile preserve the same hierarchy instead of becoming a completely different design?

16. Final Official UI Identity

Meridian Residences =

Forest Green + Olive + Champagne Gold + Warm Cream + White

- Inter typography
- 12px rounded cards
- Clean 240px sidebar dashboard
- 64px shared top navbar
- Subtle shadows and borders
- Lucide icons
- Minimal animations
- Premium serviced-apartment feel

Implementation rule

The shared design system should be created first, then frozen while the four members build their story-specific pages. Future GPT requests should include the Master UI Instruction or refer to this document as the source of truth. This prevents UI drift across the team.
